Assignment-1

1. What is python and why is it called an interpreted language?

Ans Python is a High-level, easy-to-learn Programming language.

It is called an Interpreted language because the code is executed line-by-line by an Interpreter.

2. What are the key features of python that make it popular for begineers and professionals?

Ans (i) Easy to read and write (simple syntax)

(ii) Interpreted Language.

(iii) Platform Independent.

(iv) Large Libraries (like Numpy, pandas, etc)

(v) Supports multiple Programming styles (oops, functional, etc.)

3. What is difference between python 2 and python 3.

Ans → Python 3 is New with print()

→ python 2 is Old and no longer Support.

4. What are python's applications in real-World projects?

Ans

1. Web Development (Django, Flask)
2. Data Analysis & Data Scince.
3. Machine Learning & AI
4. Automation & Scripting
5. Game Development.

5. What is PEP 8 and why is it Important in python programming

Ans PEP 8 is Python's Rule book for writing neat and readable Code.

6. Who developed python and in which year was it released.

Ans Python was developed by Guido Van Rossum and released in 1991.

7. What do you mean by "dynamically typed" in Python.

Ans No need to tell Variable type, python figures it out automatically.

8. What is the difference between a compiler and an Interpreter, and which does Python use?

Ans → Complier translate all code at once,

→ Interpreter runs line-by-line.

→ Python Uses Interpreter.
